## Summary

Aspiring Data Scientist with hands-on experience in Machine Learning, Data Analysis, and model development using Python. Skilled in data preprocessing, feature engineering, building predictive models using Scikit-learn and Pandas. Worked on real-world datasets to develop regression and classification models with strong evaluation techniques. Passionate about extracting insights from data and solving real-world business problems using data-driven approaches.

## EDUCATION

**Christian Eminent College, Indore (DAVV University)**

BCA (Bachelor of Computer Applications)

2024 – 2027

Data Science & Machine Learning Training – Placement Adda

2025 – Present

## Project

### Swiggy Delivery Time Prediction (Machine Learning)

- Built regression models (Random Forest, Linear Regression) to predict delivery time
- Performed data cleaning and feature engineering on 10,000+ records
- Improved prediction accuracy to 90% and reduced error (MAE)
- Conducted exploratory data analysis (EDA) to identify key influencing factors
- Tools: Python, Pandas, NumPy, Scikit-learn

### AI Website Chatbot – RAG System

- Developed an NLP-based chatbot using text embeddings and semantic search
- Processed and indexed textual data for efficient information retrieval
- Applied vector similarity techniques for relevant response generation
- Tools: Python, NLP, Embeddings, FAISS

### AI Agent Mobile Finder Project

- Built a recommendation system to suggest smartphones based on user preferences
- Designed filtering and ranking logic using user input features (budget, brand, specs)
- Processed and structured product dataset for decision making
- Tools: Python, Pandas, APIs

## SKILLS

- **Programming Languages:** Python
- **Database & Querying:** SQL
- **Data Analysis & Processing:** Pandas, NumPy, Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA)
- **Machine Learning:** Regression, Classification, Feature Engineering, Model Training, Model Evaluation, Scikit-learn
- **Deep Learning:** TensorFlow, Keras, Neural Networks, Convolutional Neural Networks (CNNs)
- **Data Visualization:** Matplotlib, Seaborn
- **Tools & Technologies:** Git, GitHub, Jupyter Notebook, VS Code
